Samsung Galaxy S7, LG G5 unveiled as companies try to revive smartphone sales

Samsung Galaxy S7, LG G5

Baku, 22.02.2016, 11:52 Time

USPA NEWS - Samsung Electronics Co Ltd and LG Electronics Inc unveiled their latest smartphones at the Mobile World Congress industry show in Barcelona on Sunday, seeking to buck the slowdown in industry growth.

Phone makers face another tough year in 2016 as subdued global growth and persisting currency weakness in key emerging markets sap consumers' spending power. A push by Chinese manufacturers to expand overseas amid slowing growth in their domestic market may also undercut margins further.

In a bid to recapture market share, Samsung launched two new versions of its Galaxy S smartphone and brought in Facebook Inc Chief Executive Mark Zuckerberg for a surprise appearance to tout the potential of virtual reality, prompting hundreds of people to rush to the stage to record the moment.

LG, which lost money from its mobile business last year as its flagship products struggled, introduced a modular design to its new G5 smartphones that allows users to replace or upgrade functions such as camera and audio independently.

It also launched a virtual reality headset and accessories including a drone controller to pair with the G5.

Analysts and investors cheered LG's features, which they said were different enough to possibly revive sales, but were lukewarm about Samsung's offerings, saying they only featured incremental upgrades.

"I think it's possible for LG's mobile business to recover on its new product launch, since they delivered significant changes with the G5," said Seoul-based HDC Asset Management fund manager Park Jung-hoon.

"The Galaxy S7, however, doesn't seem to be creating as much buzz," Park said.

Samsung shares were down 1.3 percent as of 0212 GMT, underperforming a 0.2 percent fall for the broader market, while LG shares were up 3 percent.

Revamps could prove key to smartphone makers as 2016 shapes up to be another tough year: researcher TrendForce expects the smartphone market growth to slow to 8.1 percent from 10.3 percent a year earlier.

Margin pressures are also expected to intensify for the industry as Chinese manufacturers seek to expand overseas to counter slowing domestic demand.

Samsung on Saturday said its mobile payments service, Samsung Pay, will launch in China in March, a month after Apple launched its Apple Pay service in the world's biggest smartphone market.

The company fell out of the top five in the world's top smartphone market last year but hopes that its easy-to-use payments service will help it regain sales momentum.

"The challenge you have got in the smartphone market is breaking through all that sameness. From a design and functionality perspective, everything looks and feels the same," said Bob O'Donnell, president of Technalysis Research.

"So the challenge is finding things that stick out."
